

Key Features:

- In stainless steel
- Up to 15 Liter of output
- Based on the mixing system of KKM Kniele Cone mixer
- Fast discharge and cleaning
- Determination of rheological properties
- Quick-change system of mixing tools
- No loss of quality when mixing small quantities
- Liquid & Dry dosage unit
- Moisture sonde

Application:

- Dry mix
- Pet food
- Dry mortar
- Lightweight plaster
- Mineral cast Concrete
- Dry chemical mixtures
- Fireproof Concrete
- Liquid glue

Rheometer

Tribometer

Hygrometer

Camera

The KNIELE KKM-RT combines a laboratory intensive mixer with a rheometer. The rheological properties of the mixture are determined in relative or absolute units. The scope of performance is extended by a probe for moisture determination and a dosing unit for the addition of liquid or dry components. This enables automated parameter studies for compound development. The entire mixing process can be observed via video.
